

Google Sheets: Spreadsheet basics

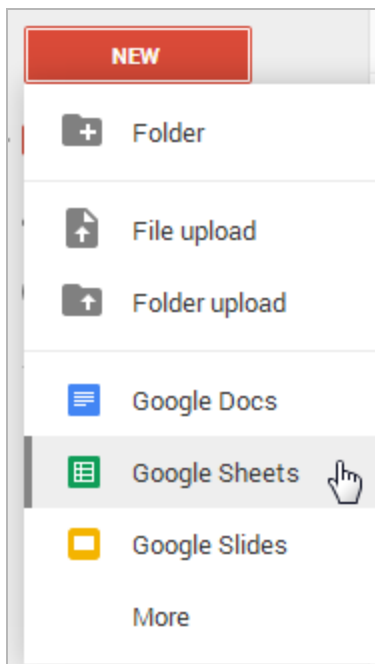

To view all of your Google sheets, or to create a new spreadsheet, visit docs.google.com/spreadsheets.

Create a spreadsheet

From the [Google Sheets home screen](#), click the **Create new spreadsheet** button in the lower right corner of your screen.

Or, from [Google Drive](#), click the **New** button and select **Google Sheets**.

Click **Untitled spreadsheet** to name your spreadsheet. (You can rename your spreadsheet at any time by clicking the title.)

Format data in your spreadsheet

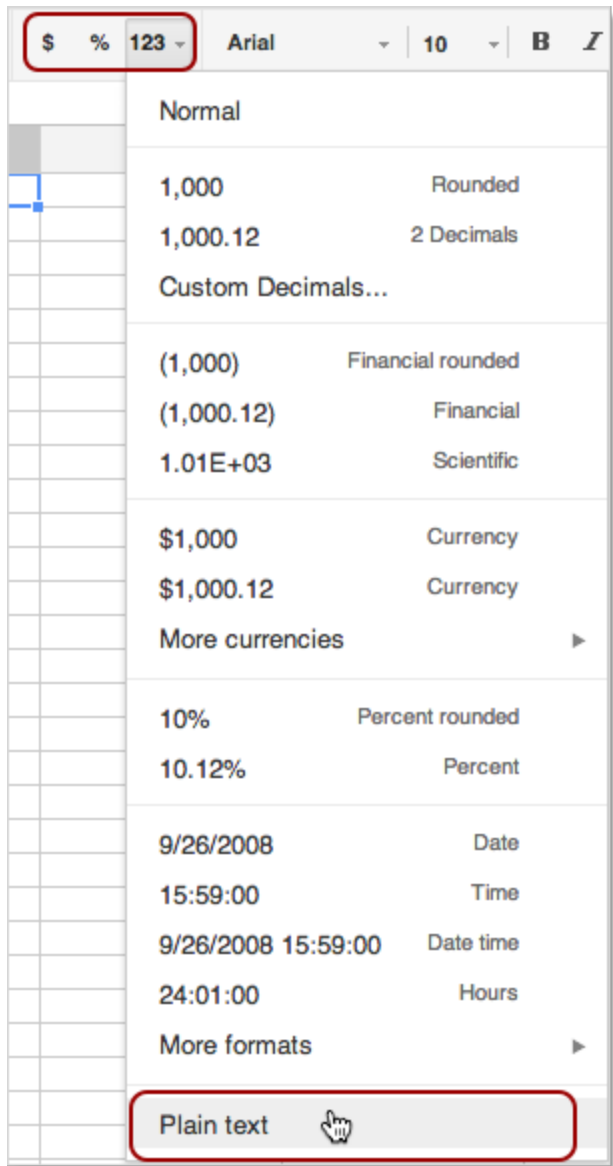

To enter text or data in your spreadsheet, just click a cell and start typing. By default, data is entered in

“Normal” format, which means no special formats are used—what you type is what you get.

Use the menus and toolbar to format the selected cells in your spreadsheet.

You can format your data as currency, percentages, dates, times, plain text (where numbers are treated as text instead of numerical values to be interpreted), or other formatting options:

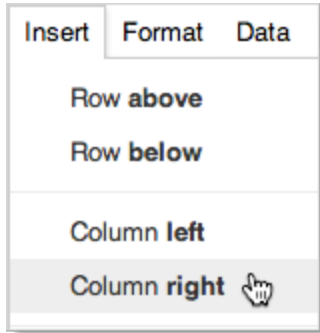

Work with rows, columns, and sheets

The building blocks of a spreadsheet are rows and columns of cells filled with data. Each grid of rows and

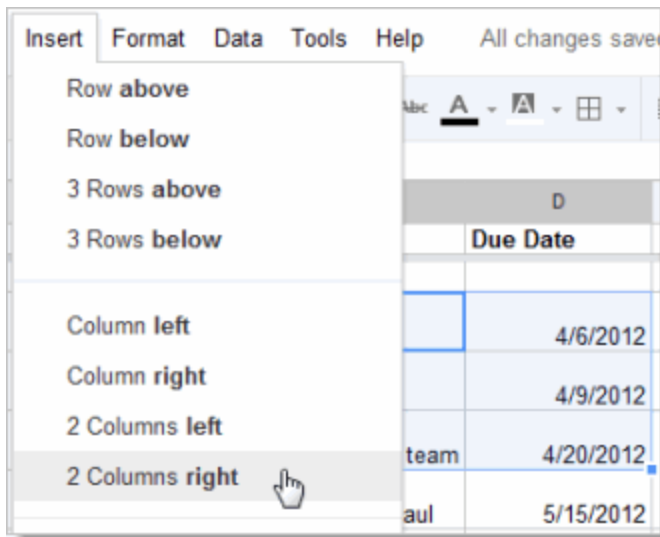

columns is an individual sheet.

Add a row or column

1. Select any cell that should be next to the new row or column.
2. On the menu bar, click **Insert** and then choose where to add your row or column.

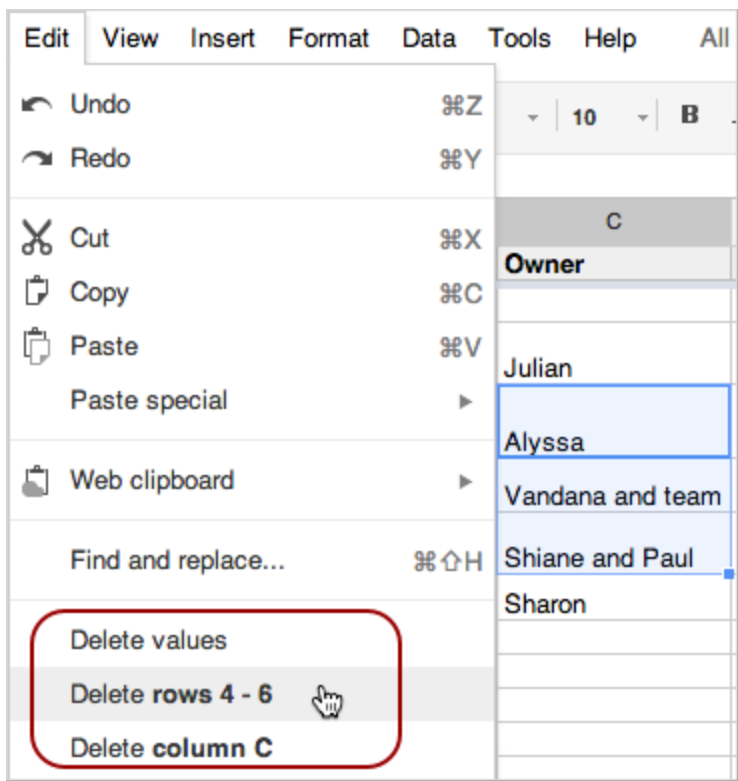

Tip: To add multiple rows or columns at one time, first select the number of rows or columns you want to add. The Insert menu will then give you the option to add that many rows or columns. For example, if you select a block of 2 columns by 3 rows, the **Insert** menu shows these options:

Delete a row or column

1. Select one or more cells in the row or column you want to delete. If you select multiple cells, you can delete multiple rows or columns at a time.
2. On the menu bar, click **Edit** and then choose which rows or columns to delete. For example, if you selected rows 4, 5, and 6 in column C, you'll see these options:

If you only want to delete the data in the cells (but still keep all the existing rows and columns), select **Delete values**.

Move a row or column

You can use **Copy** and **Paste** (on the **Edit** or right-click) menu to move cells, but here's a quicker way:

1. Select the cell or block of cells that you want to move.
2. Move your cursor to the edge of the selected cells, until you see the cursor change into a hand:

	A	B
1	\$590.37	33%
2	\$304.13	17%
3	\$268.35	15%
4	\$143.12	8%
5	\$35.78	2%
6	\$447.25	25%
7		
8	\$1,789.00	100%
9		
10		
11		

3. Hold down the mouse button and drag the cells to their new location.

f_x	\$590.37		
	A	B	C
1	\$590.37	33%	
2	\$304.13	17%	
3	\$268.35	15%	
4	\$143.12	8%	
5	\$35.78	2%	
6	\$447.25	25%	
7			
8	\$1,789.00	100%	
9			
10			
11			
12			
13			
14			

- Release the mouse button to drop the cells in their new location.

Keep header rows and columns in place

Your first rows or columns might be headers that you want to always keep at the top or left as you scroll through your spreadsheet. In that case, you'll want to freeze the first rows and columns so they stay put. You can freeze up to 10 rows and 5 columns.

Just click **View > Freeze rows** (or **View > Freeze columns**), and then select the number of rows to freeze.

In the example below, the top 2 rows are frozen. You can tell by the thicker line beneath Row 2:

	A	B	C	D	E	F
1	Area	Milestone	Owner	Due Date	Status	Notes
2						
3	Support policy	Send tiering proposal to management	Julian	4/6/2012	Complete	Approved
4	Support	Assign specialists for each area	Alyssa	4/9/2012	Complete	
5	Documentation	Help content final review	Vandana	4/20/2012	In progress	
6	Training	Finalize curriculum	Shiane and Paul	5/15/2012	Not started	Need to identify additional trainer
7	Support	Estimate support impact	Sharon	4/13/2012	Complete	
8						

You can also drag and drop the blue line sections to quickly change the number of frozen rows or columns.

Once frozen, your headers will stay in place as you move about your spreadsheet, and they won't be sorted if you sort a column.

Add a new sheet

You might have multiple spreadsheets for a given project. For example, a travel company planning a tour might create separate spreadsheets for tour dates, customers, transportation, hotels, excursions, and so on.

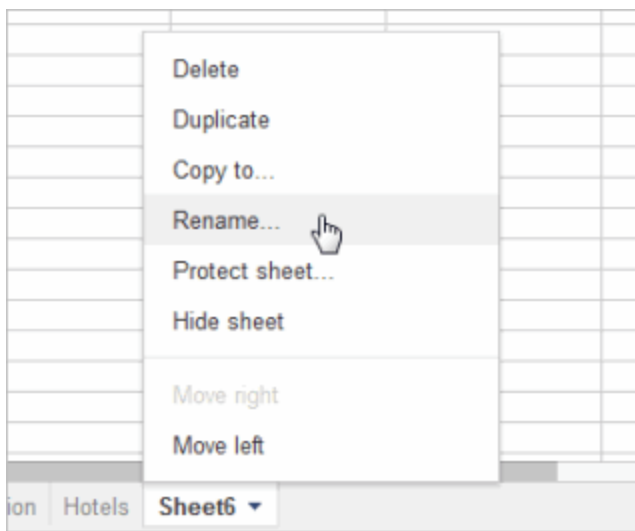

Instead of creating multiple spreadsheets, you can add sheets to an existing one and jump back and forth between the related sheets, similar to how you might use tabs in a browser to jump between different web sites.

To add a new sheet:

1. Click the plus sign at the bottom left of your spreadsheet:

2. By default, sheets are named Sheet1, Sheet2, Sheet3 and so on, so you'll probably want to rename the new sheet. Select the tab for the new sheet, click the drop-down arrow, and select **Rename**:

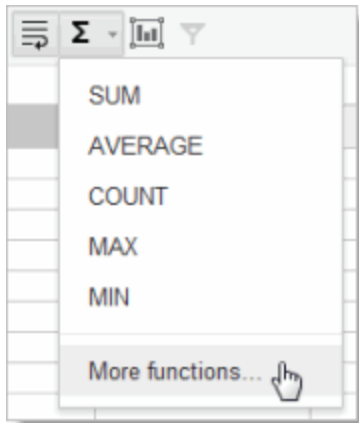

The quickest way to re-order sheets is to drag and drop the tabs.

Get started with functions

Functions make calculations easy and automatic. Access functions from the summation sign on the Edit toolbar (alternatively, click **Insert > Functions** from the menu toolbar). You'll have immediate access to some of the

most common formulas like Sum and Average. To learn about these functions, plus all the additional formulas that you can use, click **More functions**.

To use the data from other cells in your functions, refer to the cells by column number followed by row number (A6, C2, and so on). For example, here's how to use the SUM function to add the cells directly above it:

1. Select the cell to contain the sum.
2. Click the function button (the summation sign) and select **SUM**.
3. The SUM function is inserted in the cell:

4. Select the range of cells you want to add. The cell range (D2 to D5 in this example) is added to your SUM function:

5. Press **Enter** or **Tab** to see your result:

Share and collaborate

Take advantage of the collaborative features of Google Sheets by sharing your spreadsheet with others. Multiple people will be able to edit the same spreadsheet at the same time—you'll always have the most up-to-date version at your fingertips.

To get started sharing a spreadsheet, click the **Share** button at the top right of the page. See [Sharing and Collaboration](#) to learn more about sharing settings.

Collaborating in Sheets is slightly different than in Docs: only one person can edit a cell at any given time, and comments are stored with individual cells.

Collaborate with joint edits

A cell that you've selected is outlined in blue, but when someone else is editing your spreadsheet, a cell they've selected has a different color border. If you want to see who has selected a cell, just move your mouse there:

C	D	E	F
Owner	Due Date	Status	Notes
Julian	4/6/2012	Complete	Approved
Alyssa	4/9/2012	Complete	
Vandana and team	4/20/2012	In progress	
Shiane and Paul	5/15/2012	Not started	Need to identify additional trainer
Sharon	4/13/2012	Complete	

With Google Sheets, you don't have to worry about overriding edits made by someone else. A cell will be greyed out while it's being modified by someone else:

Help content final review	Vandana and team
Finalize curriculum	Shiane and Paul
Estimate support impact	Sharon

If you try to edit a greyed out cell, your changes won't stick.

Collaborate with comments

If you can edit a spreadsheet, you can add comments to individual cells:

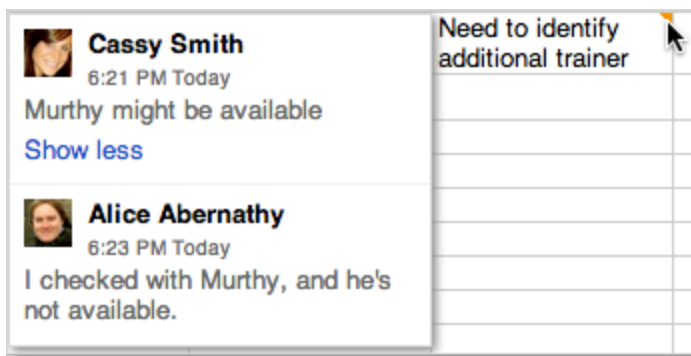

1. Select the cell you want to comment on.
2. Click **Insert > Comment** (or use the right-click menu).
3. Type your comment. It will automatically be "signed" with your name and date:

4. Click into another cell. You'll see that the cell you commented on now has an orange triangle in the upper-right corner to indicate comments:

5. To see comments, just hover over the cell:

6. If you want to modify your comment, click the cell and select **Edit** or **Delete**. To reply to someone's comment, just type your response in the **Reply to this comment** field that shows up when you click the cell. When you're done with comments for a cell and want to remove them, click the cell and select **Resolve** to remove the thread of comments.
